

Risk — Safety, Health, Environment and Quality

What the Practitioner Will Benefit

Management of Risk is a process of identifying, assessing, and control the risks by analysing in advance and taking preventative steps that will minimise the adverse effects of unwanted risk in an organisation.

The purpose of this course for Practitioner and Consultants is to confirm that the individuals hold the required knowledge of managing the risk in the organisation.

Our expert trainers, who have years of experience in risk management, will help delegates to pass the Advanced Risk Assessment for SHEQ Course exam in the very 1st attempt.

Course Objectives

Learners will acquire knowledge and practical skills to improve their competency in carrying out general risk assessments. Meet the requirements of International Standards and legislation. They will understand the main categories of incidents and ill health, their socio-economic costs and recognise the benefits of SHEQ management and understand the reasons for using risk assessments.

Course Outcomes

Successful completion of the training programme will enable candidates to:

- Contribute to the risk assessment programmes at their workplaces.
- Conduct risk assessments (assuming they have the necessary technical knowledge in relation to the activities and environmental issues being assessed).
- Organise and implement a risk assessment programme where this has not already been done.
- Participate in the identification of specific training needs for the activities being assessed.
- Assist employers in meeting legal requirements and promote improved standards of health and safety within their organisation.
- Suitable candidates for the programme and assessment will need to have good standards of written and oral communication, the ability to analyse workplaces and work activities, the confidence and ability to seek additional advice and information and the capability to work as part of a team.

Course Details

Distance Learning — 3 Days
